Bezier Curve: An Introduction The generalized version of Bezier curve is NURBS. In any Bezier curve, there would be controls points or control handles and control polygon. The point on the Bezier curve, like different types of curves, is actually the weighted sum of different control points present.

NURBS are being used for computational reasons such as being easily processed by a computer, being stable to floating points errors and having little memory requirements and for the ability to represent any kind of curves or surface. They are the generalization of non-rational B-splines which are based on rational Bézier curves.
