Protist Observation Lab

A protist is any eukaryote that cannot be classified as a plant, animal, or fungus. There are several types of protists. We will be learning about three types of protists: protozoans, algae, and decomposers. In this lab you will be observing a type of protist called a protozoan. A protozoan is a protist that is similar to an animal.

Lab 1 - Amoebas - 7B Science Labs

Carolina LabSheets™. In this lab, students observe a variety of protists and record basic observations of them. Traditionally, protists were classified under Domain Eukarya, Kingdom Protista, and were divided into phyla mainly on the basis of their mode of locomotion. However, it has long been recognized that Protista is

not a natural grouping, and that mode of locomotion has little bearing on the evolutionary relationships within these organisms.

Survey of Protista | Carolina.com

By observing, drawing, and classifying protista, we learned about the cell structure and movement patterns of these one-celled organisms. We also learned about the differences and similarities of various protist cells . Since we will observe how protists move, it will be interesting to figure out patterns of locomotion.

Sample Descriptive Lab Report

State the domain of the protista. Be able to identify the green algae examples viewed in lab and know if they are colonial or filamentous. Be able to recognize the protista specimen viewed in lab. Identify protista as photosynthetic or heterotrophic. Lab 2:
