Digital Soil Assessments And Beyond

Digital soil assessments and beyond contains papers presented at the 5th Global Workshop on Digital Soil Mapping, held 10-13 April 2012 at the University of Sydney, Australia. The contributions demonstrate the latest developments in digital soil mapping as a discipline with a special focus on the use of map products to drive policy decisions particularly on climate change and food, water and soil security.

Digital Soil Assessments and Beyond - Proceedings of the ...

Digital soil assessment goes beyond the goals of digital soil mapping. Digital soil assessment (DSA) can be defined (from McBratney et al. (2012)) as the translation of digital soil mapping outputs into decision making aids that are framed by the particular, contextual human-value system which addresses the question/s at hand.

DSA comprises three main processes: (1) a soil attribute space inference system, (2) evaluation of soil functions and the threats to soils, and (3) risk assessment and the development of strategies for soil protection. Digital risk assessment consists of integrating political, social, economical parameters and general environmental threats for building, modelling and testing some scenarios about environmental perspectives.
