Neon is a chemical element with the symbol Ne and atomic number 10. It is a noble gas. Neon is a colorless, odorless, inert monatomic gas under standard conditions, with about two-thirds the density of air. It was discovered (along with krypton and xenon) in 1898 as one of the three residual rare inert elements remaining in dry air, after nitrogen, oxygen, argon and carbon dioxide were removed.

Neon - Wikipedia

I need the solution manual for the 9th edition of Systems Understanding Aid. If someone has Document 25, then that would be a huge help. I have been using Transaction List B which is the green one.

(Solved) - Does anyone have the solution manual for ...

A neon light is also known as a luminous tube. This form of lighting is frequently used for signs. The basic design of the neon light is a glass tube with an electrode at one end. The glass tube is full of an inert gas, in this case neon. When a high voltage power source is connected to the light, it will glow.
