Environmental Pollution Control/Environmental Engineering Links to databases for air and water quality, solid waste management, and environmental law and policy . Also helpful for topics such as environmental chemistry and toxicology, sanitation and treatment processes, and treatment plant design.

Environmental Pollution Control/Environmental Engineering

Air pollution engineering consists of two major components: (1) air pollution control and (2) air quality engineering. Air pollution control focuses on the fundamentals of air pollutant formation in process technologies and the identification of options for mitigating or preventing air pollutant emissions. Air quality engineering deals with large-scale, multi-source control strategies, with focus on the physics and chemistry of pollutant interactions in the atmosphere.
